Building genuine bridges between aviation industry and humanitarian aid

Aviation expertise - Humanitarian experience – Developmental approach

With its openness to the commercial aviation sector, ASF is pooling resources in order to set up the most cost effective responses to disasters with partnerships inspired by the Corporate Social Responsibility of the whole aviation industry.

ASF, an international NGO, is the only aviation charity able to build up aviation projects within the framework of humanitarian **values, reference frame** and **quality system** in order to ensure relevance, efficiency and accountability. Doing so, ASF is the gateway of aviation industry CSR to the humanitarian world.

ASF is a special meeting point, a place for sharing, a workshop forging common values between the aviation community and the humanitarian community.
